What is TFL SafeSpace? (The Big Picture)

TFL SafeSpace is a confidential, culturally safe digital mental health platform built specifically for Kenyan youth and young adults. It eliminates the fear of stigma by allowing anyone to share their struggles 100% anonymously, listen to real audio stories, access licensed tele-psychologists, and receive immediate crisis safety net intervention when in acute distress.

1. Anonymous Peer Rooms

Youth post and reply without real names or emails. Generates soothing handles like @GentleSeeker304 and avatars with full voice recording support.

2. AI Semantic Crisis Triage

Powered by OpenRouter & Gemini AI to understand subtle cries for help across **English, Swahili, and Kenyan Sheng** (e.g. farewell notes or giving away items).

3. Care Store & Care Passes

Supporters buy affirmative merchandise (Hoodies, Journals) via **M-Pesa**. Every purchase unlocks free Care Pass counseling vouchers for youth in need.

4. Android SMS Gateway

Uses a local Android phone with a Safaricom SIM to send instant crisis alerts to on-duty counselors and deliver Care Pass voucher codes directly to users' SMS inboxes.

Quick Note for Testers: You do not need to write code or run commands. All testing can be done using your normal web browser and mobile phone by following the step-by-step guides on the next pages.

How to Test Each Component (Step-by-Step)

Follow these friendly, click-by-click instructions to test each part of the platform.

1

Anonymous Community & Voice Stories

PEER SUPPORT

Testing anonymous posting and audio playback

Goal: Verify that someone can share what they are going through anonymously without revealing identity.

- Open the app at **http://localhost:3002** (or your live web link).
- Click on any **Listening Room** (e.g., *Anxiety & Panic*, *Grief & Healing*, or *Burnout & Career*).
- Notice your anonymous handle at the top (e.g., **@QuietSoul795**) and peaceful lotus/sun avatar.
- Type a safe personal reflection in the share box:

"Today was stressful at school, but taking slow deep breaths is helping me get through it."

- (Optional) Click the microphone icon  to record a quick 5-second voice note.
- Click **"Share Gently"**.

- ✓ **What You Should See:** Your post appears instantly in the room feed under your anonymous handle. If you recorded audio, an interactive soothing audio waveform player appears that anyone can play.

2

AI Semantic Crisis Triage & Instant Help

SAFETY NET

Testing Kenyan Swahili/Sheng crisis detection & phone SMS alert

Goal: Verify that when a user expresses acute distress, the system flags it, offers emergency helplines, and alerts the on-duty counselor.

- In any Listening Room, type a message expressing acute hopelessness in Sheng, Swahili, or English:

"Hii safari ya dunia nimefika mwisho nawaachia kila kitu sitakuwa hapa kesho"

(Or in English: "I gave away all my belongings to my sister, this is my final night")

- Click **"Share Gently"**.

- ✓ **What You Should See:**
 - An emergency crisis modal immediately opens displaying Kenya 24/7 free hotlines (**Befrienders Kenya 0722 178 177, Red Cross 1199, LVCT 1190**).
 - The post is quietly flagged and sent to the on-duty psychologist's moderation desk.
 - The on-duty counselor's physical phone automatically receives an urgent SMS alert!

3

Care Store & M-Pesa Voucher Delivery

Testing merchandise purchase & automated SMS Care Pass delivery

MERCH & PASS

Goal: Test how buying physical merchandise funds counseling sessions and texts a Care Pass code to the buyer.

- Click on the **Care Store** tab in the navigation.
- Browse products like the *TFL Signature Hope Hoodie* (KES 2,800) or *Guided Healing Journal* (KES 1,200).
- Click "**Support & Unlock Care Pass**" on any item.
- Enter your Kenyan phone number (e.g. 0712345678 or 0105505631).
- Click "**Complete M-Pesa Checkout**".

✓ **What You Should See:** A success receipt appears on screen with your generated Care Pass code (e.g. CARE-HOPE-TFL). Simultaneously, your Android gateway phone automatically sends a real SMS text message containing the voucher code directly to your phone number!

4

1-on-1 Confidential Psychologist Consultation

Testing voucher redemption and live private counseling chat

TELE-THERAPY

Goal: Test how an anonymous client redeems their Care Pass code to start a private session with a licensed counselor.

- Click on the **1-on-1 Counseling** tab.
- Choose a verified licensed Kenyan psychologist (e.g., **Dr. Faith Mwangi**, *Licensed Clinical Psychologist*).
- Enter your voucher code (e.g. CARE-HOPE-TFL or test code CARE-DEMO-TFL).
- Click "**Redeem & Start Confidential Session**".

✓ **What You Should See:** A private, end-to-end encrypted session room opens. You receive a welcoming message from Dr. Faith Mwangi and can exchange confidential messages in real-time without revealing your real name.

Goal: Verify how clinicians review flagged posts and intervene with verified badges and 1-on-1 room invites.

- In your browser, visit **<http://localhost:3002/moderation>**.
- See all active flagged cases color-coded by severity (**CRITICAL** in rose, **PRIORITY** in amber).
- Click "❤️ **Send Verified Clinical Response & Invite to Private Room**".
- Pick an empathetic starter chip (e.g. *"You are heard and safe here. Please take a slow breath..."*).
- Ensure [x] Open & link confidential 1-on-1 private crisis room is checked.
- Click "**Post Clinical Reply & Resolve**".

✓ **What You Should See:** The case is instantly resolved in the moderation queue, and a verified clinical badge response (👤 *[TFL Verified Clinical Team — Dr. Faith Mwangi]*) is published with a private crisis room link for the user.

Component Summary & Operational Checklist

Quick reference of how each component is structured and how it operates in production.

COMPONENT	WHAT IT DOES	TECHNOLOGY USED	STATUS
Anonymous Community Feed	Peer listening rooms, anonymous handle generation, audio story recording & playback.	Next.js 14, Tailwind CSS, Web Audio API	Verified
AI Semantic Safety Engine	Multi-lingual crisis triage in Sheng, Swahili, and English. Displays 24/7 Kenya crisis helplines.	OpenRouter (Gemini 3 Flash) + Fast Regex	Verified
Care Store & M-Pesa	Merchandise checkout via M-Pesa STK push. Automatically generates Care Pass voucher codes.	M-Pesa STK Push API, Supabase DB	Verified
1-on-1 Counseling Desk	Private booking, voucher redemption, and encrypted live chat with verified psychologists.	Supabase Realtime, Private Session Rooms	Verified
Android httpSMS Gateway	Dispatches real SMS crisis alerts, voucher delivery, and counseling appointment reminders.	Android Phone (SIM1) + Firebase FCM	Verified
Clinical Moderation Desk	Queue at /moderation for clinicians to review posts, hide triggers, and send verified replies.	Next.js Secure Role Portal	Verified

2-Way Inbound SMS Keywords (For Gateway Phone)

Anyone in Kenya can also text these keywords directly to your gateway phone number:

KEYWORD	WHAT THE PHONE AUTOMATICALLY DOES
HELP or MSAADA or CRISIS	Automatically sends back 24/7 free Kenyan crisis helplines (Befrienders 0722 178 177, Red Cross 1199, LVCT 1190).
VOUCHER <CODE>	Queries the database and texts back if your Care Pass code is valid, active, or redeemed.
Incoming M-Pesa SMS	Automatically reconciles pending store orders, marks as paid, and texts the Care Pass code to the buyer.

 **Privacy Guarantee:** TFL SafeSpace is built with zero-compromise privacy. IP addresses are hashed with HMAC SHA-256 and never stored in plaintext. Posts, voice recordings, and counseling sessions remain strictly confidential.
